**KANGAROO ePump™**

Enteral Feeding Pump
Section I – General Information

The KANGAROO ePump enteral feeding pump is a simple-to-use, precision enteral feeding pump. It is easily programmed to provide patients with either continuous or intermittent feeding, and can provide automatic flushing capability when used with KANGAROO ePump Feed & Flush Sets.

User Interface:
- Intuitive user interface
- Large, backlit LCD display
- Step-by-step prompts to guide programming and operation
- “Stoplight” LED array visually indicates pump status in a bright or darkened room

Ergonomics:
- Quiet operation
- Compact, aesthetic design
- Tabletop usage or IV pole mounting
- Simple loading of Pump Sets
- Transparent side door to protect Pump Set
- Integrated handle for easy transport

Features:
- MISTIC (Magnetic Intelligent Set Type Identification Connector) Feed-Only vs. Feed & Flush Set identification system to ensure match between the pump's user interface and Pump Set type
- Automatic Anti-Free-Flow (AFF) System
- Audible alarm to indicate errors or Pump Set loading conditions
- Attitude-independent design eliminates need for drip chamber on pump set
- Sensor technology detects both upstream and downstream flow conditions
- Continuous feed, intermittent feed, and flush capability
- Auto-prime feature reduces the need for time-consuming manual priming
- Hold feature with restart and Keep Tube Open (KTO) feature
- Stores previous 72 hours of feeding and flushing history

Service:
- Serial I/O port for data retrieval and software updates
- Uses replaceable, rechargeable NiMH Battery Pack for 15 hours of backup power
- Removable Power Cord
Figure 1A. KANGAROO ePump features, front and rear views.
Section II — Safety and Warnings

CAUTION: U.S. federal law restricts the sale of this device to physicians or to their direct representatives.

1. Read this booklet thoroughly before using the KANGAROO ePump enteral feeding pump.

2. Do not use this device near flammable anesthetics.

3. Disconnect power supply before cleaning or servicing.

4. Use only KANGAROO ePump enteral feeding pump Power Cord (with built-in A/C adapter) with pump. See Section XIII - Service Part Numbers for replacement of Power Cord.

5. Use only KANGAROO ePump enteral feeding pump Pump Sets with this device. Pump is not compatible with other Pump Sets.

6. For re-certification, see Section VI - Re-certification of Performance. For other integrity checks, consult with a qualified Biomedical technician or contact the manufacturer (Section XI - Customer Service).

7. For service or for technical information, please contact Customer Service (Section XI).

8. Do not open the main housing, as there are no user-serviceable parts inside. Opening may affect function of device and voids the warranty. To replace battery, see Section VIII.

9. Dispose of old battery-powered electronic equipment in a manner consistent with institutional policy for expired equipment disposal.

10. Cleaning frequency and practices must be consistent with institutional policy for cleaning of non-sterile devices. See Section VII - Cleaning, for instructions on cleaning the KANGAROO ePump enteral feeding pump.

11. See icon descriptions in Section III - Icon Identification and Section X - Specifications and Symbols for additional safety information.
12. This device is designed to minimize the effects of uncontrolled electromagnetic interference and other types of interference from external sources. Avoid use of other equipment that may cause erratic operation or degradation in the performance of this device.

13. **WARNING:** The serial I/O port (see Figure 1A) is intended only for use by the manufacturer.

   Any accessory equipment that can be connected to the DB9 Serial I/O port, and which does not comply with the equivalent safety requirements of this equipment, may lead to a reduced level of safety of the pump. While use of the pump's DB9 port is not recommended for customers, the following should be considered in the event that the customer decides to connect to this port:

   • The accessory is specifically certified as complying with the safety requirements for accessories used with the pump, whereas the safety certification of the accessory has been performed in accordance to the appropriate IEC 60601-1 and/or IEC 60601-1-1 harmonized standard.

14. **CAUTION:** This enteral feeding pump should only be used for patients who can tolerate the flow rates and accuracy levels delivered by the pump. Premature infants may require higher accuracy rates than specified for this enteral feeding pump.

---

### Section III – Icon Identification

**Run Mode**
Vertically-moving droplet in `RUNNING` screen indicates Run mode.

**Battery Symbols**
- Full charge
- 2/3 or less charge
- 1/3 or less charge
- Very low battery (15 minutes max.)

**Auto Priming Indicator**
When auto priming, the bar will progress to show auto prime feature is active.

**Volume Setting**
Indicates alarm volume setting.

**Error Indicator**
Pump operations are stopped until the error is resolved.

**Information Indicator**
This indicates information only, and does not require any immediate action.
**EZMODE Indicator**
Indicates that EZMODE feature is turned on.

**Communication Indicator**
Indicates that communication feature is turned on.

**Volume to be Delivered Indicator**
Indicates that VTBD feature is turned on.

**Keep Tube Open**
Indicates that Keep Tube Open feature is turned on.

---

**Section IV — Initial Setup**

**Attaching the A/C Adapter Power Cord**

Plug the Power Cord into the A/C Adapter Port on the back of the pump. See Figure 1A to locate port on pump. Make note of the location of the pins and tab on the plug to properly orient the plug.

![Figure 2A. Alignment of A/C Adapter plug with pump's adapter port.](image)

The connector, which attaches to the back of the pump, has a spring-loaded locking sleeve that locks into the pump, thus helping to prevent the connector from being accidentally unplugged from the pump. To remove the connector, grasp the outer sliding sleeve member and pull. Do not detach the connector by pulling on the cord only.

(A cord extension accessory is available that will allow the wall plug to be separated from the power transformer, see Fig. 2B. The cord extension order number is located on page 37.)
Battery Setup

The battery pack is fully charged before shipping, and is left unconnected to optimally preserve battery life.

**WARNING:** The battery should be connected before using the pump.

It is also recommended that the battery charge be “topped off” before battery-only operation is utilized. The battery pack will charge continuously whenever the pump is plugged into a wall outlet, including during normal use of the pump with A/C power. Eight hours of charging is required to fully recharge the battery pack.

A new battery pack will provide approximately 15 hours of service before needing to be recharged.

Attaching Pole Clamp

The KANGAROO ePump enteral feeding pump can be attached to a vertical pole using the Pole Clamp, included with the pump. The pole clamp provides the ability to retain the power cord to prevent accidental cord removal or cord loss. Simply place the power cord into the U-shaped groove located on the back of the pole clamp as shown in Fig. 3 and attach the pole clamp to the KANGAROO ePump enteral feeding pump. Be sure not to pinch the power cord or damage the cord insulation when installing.

To attach the Pole Clamp to the KANGAROO ePump enteral feeding pump, align the hole on the Pole Clamp with the mounting hole on the back of the pump. Use a 3/8" - 16 bolt to fasten together, as shown in Figure 3.
If cord restraint is preferred but use of the pole clamp is not desired, a cord restraint clip is provided with the KANGAROO ePump enteral feeding pump. Using the pole clamp mounting bolt, follow the pole clamp assembly instruction to attach the cord clip (Refer to Fig. 3).

Section V — Instructions For Use

Quick Start

1. Press **POWER** on lower, right-hand corner of control panel.
2. Open blue door enclosing Pump Set loading area.
3. To load Pump Set (refer to Figure 4):
• Grasp finger tab on valve and insert into left pocket (1).
• Grasp black ring retainer and gently stretch tubing around rotor (2). Pull up on retainer and insert into right pocket (3).
• Press down on finger tab to ensure that valve is fully seated. Finger tab should align with locating rib.
• Close blue door.

(Note: display status line should read SET LOADED).

4. To automatically prime the pump, press PRIME PUMP and AUTO PRIME. For Feed & Flush sets, auto priming will prime both lines.

5. To directly control pump priming, press PRIME PUMP and then press and hold the HOLD TO PRIME button(s). If a Feed & Flush Set is used, remember to first press HOLD TO PRIME FLUSH until the flushing fluid has reached the valve, and then press HOLD TO PRIME FEED until the feeding fluid has reached past the valve and down to the distal end connector.

6. Use buttons on left side of LCD to set the feeding parameters. Set flushing parameters if a Feed & Flush Set is loaded. The continuous or intermittent feed mode selection is made under the MORE options menu.

7. Press RUN when ready to start. The screen will display RUNNING.

8. To stop, press HOLD or press and hold the POWER button.

---

**General Startup**

**Placement/Mounting**

There are two recommended placement methods for the KANGAROO ePump enteral feeding pump.

• Attached to a vertical IV pole via the Pole Clamp peripheral device, included with the pump.

• Placed feet down on any horizontal surface.

**A/C Power Operation**

Plug the KANGAROO ePump enteral feeding pump into an A/C power outlet for normal operation. When the pump is not plugged in, or if A/C power is interrupted, a built-in rechargeable battery will run the pump.
Battery Power Operation

If A/C power is not available to the pump, or if A/C power is interrupted, the pump will automatically operate on backup battery power. The built-in battery recharges any time the pump is plugged into an outlet.

A fully-charged, new battery will supply 15 hours of backup power at 125 mL/hr before requiring recharging. Contact Customer Service, Section XI, to replace the Battery Pack if battery life degrades.

Power On/Off

To power up the pump, press the POWER button on the lower right of the front panel. To power down the pump, press and hold the POWER button until the pump display turns off.

Language Selection, First Power Up

Immediately after powering up the pump for the first time, the language option screen will appear. Select the language using the (↑) or (↓) buttons. When the language is selected, push the fifth button (←) to enter the language selection. After the language is selected the first time the pump is powered up, the language selection screen will not appear during future power up operations. Should the language need to be changed after the initial power up, it can be changed through the “MORE OPTIONS” menu (see Figure 10A).

Keep or Clear Prior Pump Settings

Immediately after powering up the pump, if the prior feed or flush settings were not cleared and the settings are not locked in the BioTech Screen, the pump will give the following two options:

KEEP SETTINGS - Select this option to start with the same settings that were most recently programmed into the pump. Any of the previously-programmed settings can be modified, if needed. The feed volume totals, “mL FED” (Continuous Feed Mode) or “BOLUSES FED” (Intermittent Feed Mode) and “mL FLUSH” are also maintained.

CLEAR SETTINGS - Select this option to reset all input feeding settings and the output feed totals to zero. It will then be necessary to program all settings before running the pump. The BioTech options settings will not change.

Note: The output feed totals (“mL FED,” “BOLUSES FED,” “mL FLUSH”) can be cleared at any time, and without clearing the input settings, by doing the following:

• Start the pump RUNNING
• Press → HOLD
• Press → CLEAR VOLUME

The status line of the pump will then show LOAD A SET (Figure 5), or, if the Pump Set is already loaded, it will show SET LOADED (Figure 7).
Loading Pump Sets

The KANGAROO ePump enteral feeding pump will indicate **LOAD A SET** in the screen's status line if a Pump Set is not installed. A blinking icon of a Pump Set will also appear in the upper left corner of the screen. Figure 5A shows the screen for continuous feeding mode and Figure 5B shows the screen for intermittent feeding mode (intermittent feeding mode not available in EZMODE).

To load a Pump Set, follow the steps below:

1. Open the blue transparent door that encloses the rotor and Pump Set loading area.
2. Load the Pump Set by holding the finger tab on the valve, and inserting the valve down into the slot on the left. (Figure 6A)
3. Grasp the MISTIC retainer end (black ring retainer) and wrap the tubing counterclockwise around the rotor. (Figure 6B)
4. Carefully pull the MISTIC retainer end upwards to position it over the slot on the right, and then lower the retainer into the slot. (Figure 6B)
5. Press down on the valve's finger tab to ensure proper seating.
6. Close blue transparent door.

The display should read **SET LOADED** and will show one of the following opening menus, depending on the type of Pump Set detected, and whether continuous or intermittent feeding mode has been selected.
Prime Pump

The KANGAROO ePump enteral feeding pump may be primed automatically with a single button push, including the flushing line if a Feed & Flush Set is loaded. The pump can also be primed in a more interactive method using the hold-to-prime feature.

After a Pump Set has been loaded and the status line shows SET LOADED, press \textgreater{} PRIME PUMP in the opening menu (Figures 7A-7D) to get one of the PRIME PUMP menus shown in Figures 8A-8B.

Auto Priming

The AUTO PRIME option will be available if the pump senses that the currently installed Pump Set was not previously primed, and that there is no fluid in the line near the rotor. If auto-priming is desired, press and release \textgreater{} AUTO PRIME to automatically prime the line(s). For Feed & Flush Pump Sets, the auto prime feature will automatically prime both lines, starting with the flush line.
Press 4 STOP to cancel AUTO PRIME.

When auto-priming is completed, the status line will show AUTO PRIME COMPLETE and will no longer show the AUTO PRIME option. Be sure that the line(s) are fully primed. If not, use the hold-to-prime option(s) to complete the priming, as described below.

Hold-to-Prime

The hold-to-prime options allow for precise interactive control of the priming process.

Feed-Only Pump Sets

For Feed-Only Pump Sets, the screen will appear as in Figure 8A. Press and hold 4 HOLD TO PRIME FEED until the feed line has been primed down to the stepped end connector at the end of the Pump Set.

Feed & Flush Pump Sets

For Feed & Flush Pump Sets, the display will appear as in Figure 8B. First press and hold 4 HOLD TO PRIME FLUSH to prime the flushing line, and then press and hold 4 HOLD TO PRIME FEED to prime the feed line down to the stepped end connector at the end of the Pump Set.

If a Feed & Flush Pump Set is used, remember to first press 4 HOLD TO PRIME FLUSH until the flushing fluid has reached the valve, and then press 4 HOLD TO PRIME FEED until the feeding fluid has reached past the valve and down to the stepped end connector. If the feeding line is primed first, subsequent priming of the flushing line will force the air between the flush solution bag and valve into the main line, which already has been primed with enteral formula.

Re-priming after Bag Empty

A Pump Set bag that has been emptied will trigger the FEED ERROR screen. In this condition the Pump Set bag can be refilled to continue the feeding, but only after the Pump Set has been re-primed.

To re-prime the Pump Set, do the following:

• Disconnect the feeding line from the patient
• Refill the bag
• Press 4 CONTINUE to begin the pump RUNNING
• Press 4 HOLD
• Press 4 ADJUST SETTINGS
• Press 4 PRIME PUMP
• Press 4 HOLD TO PRIME to prime the line(s)

Pump Sets should not be reused after 24 hours of initial usage.

Selecting Feed Mode

EZMODE Option

The EZMODE option is a limited, CONTINUOUS MODE only setting of ePump. It feeds non-stop (no VTBD option) at a rate
0-400mL/hr as defined by the user until manually stopped. It has no BOLUS, FLUSHING, RUN MODE SCREEN LOCK, or AUTORESUME capability and displays no HISTORY information.

Turning on EZMODE will automatically force the unit out of the INTERMITTENT (BOLUS FEED) mode if set. Although the Continuous Mode feed VTBD will be set to 0 while EZMODE is enabled, the previous value of the Feed VTBD will be stored in flash memory and recalled when “EZMODE” is deselected. The user can change the Feed Rate by normal means. All other user settings, including those not compatible with the EZMODE (BOLUS VTBD, NUMBER OF BOLUSES, SUPER BOLUS, etc), that were set before the pump was put into the EZMODE will be ignored and invisible while in EZMODE but remain stored in the flash memory for when EZMODE is deselected. EZMode essentially has no effect on CLEAR SETTINGS; pressing CLEAR SETTINGS while EZMODE is enabled will clear all Feed and Flush settings and totalizers as normal, not just those that apply to EZMODE. Selecting the CLEAR SETTINGS option on power up will not clear Biotech Options such as EZMODE or LOCK SETTINGS.

If the user selects the ADJUST FEED option from either the LOAD A SET or SET LOADED screens, control will pass directly to and from the Enter Feed Rate screen and bypass the ADJUST FEED screen since without the ability to adjust VTBD in EZMode, the Adjust Feed screen is redundant.

Selecting EZMODE

EZMODE may be selected through the Biotech Options button which may be accessed on the Biotech screen (see page 21). The EZMODE setting will be stored in the flash memory and saved when the unit is shut off.

NOTE: If the user inserts a Feed/Flush set while the EZMODE is enabled, EZMODE will be cancelled and the unit will immediately revert back to the normal mode. If EZMODE is desired, the user must then re-enable EZMODE through the Biotech Options screen.

When enabled and not in CERTIFICATION MODE, a small EZ icon will be visible on the bottom of the screen near the battery icon. However, it will not appear in the POWER DOWN, SYSTEM ERROR, or LOW BATTERY SCREENS.

Figure 9.

Selecting Continuous or Intermittent Feed Mode

The KANGAROO ePump enteral feeding pump can be programmed to feed continuously or intermittently.

The continuous feeding mode will deliver the enteral nutrition at a steady rate, either until the programmed volume has been delivered or until the supply has been exhausted. The Intermittent feeding mode delivers boluses of enteral nutrition at programmed time intervals. The bolus volume and feed rate are also programmed.

To select continuous feed mode or intermittent feed mode, press MORE on the opening menu, shown in Figures 5A-5B or Figures 7A-7D, to access the MORE OPTIONS menu, Figure 10A.

The MORE option is available either before a Pump Set has been loaded (Figures 5A-5B) or after the Pump Set is loaded (Figures 7A-7D). See subsection “More Options” for information on the other options in the MORE OPTIONS menu.
Select **CONTINUOUS/INTERMITTENT** under the **MORE OPTIONS** menu, Figure 10A. Then press **CONTINUOUS MODE** or **INTERMITTENT MODE** from the **SELECT MODE** menu, Figure 10B. Press **DONE** to exit.

Continuous Mode — Adjust Feed

Continuous Mode Feeding

For **CONTINUOUS** feeding mode, the **ADJUST FEED** option is available in the opening menus (Figure 7A for Feed-Only sets or Figure 7B for Feed & Flush sets). Select this option to program the feeding parameters from the **ADJUST FEED** screen, Figure 11A.

Press **FEED RATE** in Figure 11A to define the rate of delivery. Press the **»** buttons in Figure 11B to program the rate from 1 to 400 in increments of 1 mL/hr. Press **ENTER** (top button) to exit the menu.

Press **FEED VTBD** in Figure 11A to define the Volume To Be Delivered. Press the **»** buttons in Figure 11C to program the volume from 1 to 3000 mL in increments of 1 mL. Press **ENTER** (top button) to exit the menu. If the **FEED VTBD** is set to zero, the pump will run until the supply is exhausted.

**NOTE:** When a **FEED VTBD** is set, the remaining volume to be delivered (remaining VTBD) will be displayed next to the **VT** icon on the lower right-hand portion of the screen (Figure 11A). If the **FEED VTBD** is reprogrammed during a feeding, from **HOLDING** mode, the pump will restart the feeding and deliver the entire volume of the new VTBD setting.

Continuous Mode Flushing (Not Available in EZMODE)

For **CONTINUOUS** feeding mode with a Feed & Flush Set loaded, the opening menu will appear as shown in Figure 7B. Press **ADJUST FLUSH** in Figure 7B to program the flushing parameters from the **ADJUST FLUSH** screen, shown in Figure 12A.

Press **FLUSH VOLUME** in Figure 12A to define the volume per flush occurrence. Press the **»** buttons in Figure 12B to program the flush volume from 10 to 500 in increments of 1 mL. Press **ENTER** (top button) to exit the menu.
Press **FLUSH INTERVAL** in Figure 12A to define the time interval between starts of flushing. Press the **buttons** in Figure 12C to program the time interval from 1 to 24 hours in increments of 1 hour. Press **ENTER** (top button) to exit the menu.

The pump will automatically limit flushing settings which exceed pump capabilities to deliver.

**CAUTION:** The KANGAROO ePump enteral feeding pump flushes at a rate of 1960 mL/hr (32.7 mL/minute). Use care when programming the flush volume so that it matches the patient’s need.

**NOTE:** The pump will automatically flush an additional 25 mL of water after completing the programmed delivery of formula, as long as at least one flush had occurred during formula delivery.

![Figure 12A. ADJUST FLUSH menu, continuous mode.](image)

![Figure 12B. Setting the Flush Volume.](image)

![Figure 12C. Setting the Flush Time Interval.](image)

**Intermittent Mode — Adjust Bolus (Not Available in EZMODE)**

**Intermittent Mode Feeding**

For **INTERMITTENT** feeding mode, the **ADJUST BOLUS** option is available in the opening menus (Figure 7C for a Feed-Only set or Figure 7D for a Feed & Flush set). Select this option to program the feeding parameters from the **ADJUST BOLUS** screen, Figure 13A.

Press **BOLUS RATE** in Figure 13A to define the rate of delivery.

Press the **buttons** in Figure 13B to program the delivery rate from 1 to 400 in increments of 1 mL/hr. Press **ENTER** (top button) to exit the menu.

Press **NUMBER OF BOLUSES** in Figure 13A to define the total number of boluses to be delivered.

Press the **buttons** in Figure 13C to program the number of boluses, up to a maximum of 99.

Press **ENTER** (top button) to exit the menu. The number of boluses can be set as zero, in which case the pump will run until the supply is exhausted.

Press **VOLUME PER BOLUS** in Figure 13A to define the Volume to be delivered in each bolus.

Press the **buttons** in Figure 13D to program the volume per bolus from 1 to 3000 mL in increments of 1 mL.

Press **ENTER** (top button) to exit the menu.

Press **BOLUS INTERVAL** in Figure 13A to define the time interval between starts of bolus deliveries.

Press the **buttons** in Figure 13E to program the time interval between starts of bolus deliveries from 1 to 24 hours in increments of 1 hour. Press **ENTER** (top button) to exit the menu.

The pump will automatically limit bolus settings which exceed pump delivery capabilities. For example, a bolus delivery volume of 200 mL cannot be made once per hour if a rate of 150 mL/hr is already programmed. In this case, the maximum volume allowed would be 150 mL.
**NOTE:** If the NUMBER OF BOLUSES is reprogrammed during a feeding (from HOLD mode), the pump will restart the bolus feeding and will deliver all the boluses as defined by the new setting.

---

**Figure 13A. ADJUST BOLUS menu.**

**Figure 13B.** Setting the Bolus Rate.

**Figure 13C.** Setting the Number of Boluses.

**Figure 13D.** Setting the volume per Bolus.

**Figure 13E.** Setting the time interval between starts of bolus.

---

**Intermittent Mode Feeding – Bolus Max (Not Available in EZMODE)**

The BOLUS MAX option can be used to deliver a bolus at a high rate, similar to gravity feeding.

Press ▶ BOLUS MAX in the BOLUS RATE menu, Figure 13B, to program the BOLUS MAX mode.

The feeding rate for BOLUS MAX is 999 mL/hr.

---

**Intermittent Mode Flushing**

For INTERMITTENT feeding mode with a Feed & Flush Set, the opening menu, shown in Figure 7D, will show the ADJUST FLUSH option. Press ▶ ADJUST FLUSH in Figure 7D to program the flushing parameters from the ADJUST FLUSH screen, Figure 14A.
The KANGAROO ePump™ enteral feeding pump flushes at a rate of 1960 mL/hr (32.7 mL/minute). Use care when programming the flush volume so that it matches the patient's need.

The pump will automatically flush an additional 25 mL of water after completing the programmed delivery of formula, as long as at least one flush had occurred during formula delivery.

Run

The KANGAROO ePump™ enteral feeding pump will only run when a Pump Set is properly loaded and the necessary feeding parameters have been programmed. For a Feed & Flush Set, the flushing parameters do not have to be set for the pump to begin operating. If flushing parameters are set as zeros, there will be no flushing.

After the pump has been programmed, press the RUN button to start operation. Figure 15A shows the RUNNING screen for continuous feeding with flushing. The status line will indicate RUNNING, and the droplet icon will move vertically on the screen. The green LED indicator will be illuminated to give a quick visual indication of positive status in a darkened room.

The RUNNING screen shows the feed rate, amount fed, flushing data if a Feed & Flush Pump Set is used, and the remaining volume to be delivered (remaining VTBD). The remaining VTBD is shown next to the W icon.

The RUN option can be selected from the following screens, if the proper parameters are programmed and the Pump Set is loaded:

- SET LOADED screens (Figures 7A-7D)
- ADJUST FEED screen, continuous mode (Figure 11A)
- ADJUST FLUSH screens (Figure 12A, 14A)
- HOLDING screens (Figure 18A)
The Keep Tube Open (KTo) function within the KANGAROO ePump enteral feeding pump will help prevent a blockage of the feeding set by moving the feeding solution periodically within the tube. On regular intervals, calculated from the pump's presently programmed feed rate, a small and clinically insignificant portion of feeding solution is moved through the tube. The amount of delivered fluid is monitored, tracked, and calculated into the final feed volume totalizer amounts displayed to the user. The KTo feature can be activated via the RUNNING screen. To activate the KTo feature, press the input button to the left of the KTo icon, see Figure 15A, to immediately input a desired time in minutes for which the pump will remain in the “Keep Tube Open” mode before resuming the previously programmed feeding regimen. Each press of the input button will increment the KTo time by 5-minute increments, up to 30 minutes, see Figure 15B. After “30” is reached, each additional button press will increment in larger time steps, up to a maximum of 240 minutes. Another button push after 240 will cycle the KTo back to 5 minutes. No other input is needed to start the countdown, as the time immediately counts down after the incremental value is reached.

Lock Screen Feature  (Not Available in EZMODE)

The KANGAROO ePump enteral feeding pump can be set to RUN and then locked out from unauthorized use. While the LOCK SETTINGS feature prevents only changes to the input parameters, the LOCK SCREEN feature will lock out any button presses, including RUN or HOLD, except power off.

Use LOCK SCREEN when the pump is running and there is a need to prevent tampering such as putting the pump into an unwanted HOLD. The RUNNING screen will show a padlock to indicate that no changes can be made without unlocking the screen.

To lock the screen, use the following procedure while the pump is in RUNNING mode:
• Press and hold the third button from the top for at least 3 seconds, and then release it.

To unlock the screen, use the same procedure above.
Hold

Pump operation can be paused by pressing HOLD while it is RUNNING, such as in Figure 15A. The status line will indicate HOLDING and the yellow LED indicator will be lit up to give a quick visual indication of an informational status in a darkened room.

Note: the pump's alarm will sound if it has been left HOLDING for 10 minutes without further input.

There are five options available during HOLDING. See Figures 18A and 18B.

![Figure 18A. HOLDING mode options, continuous feeding mode.](image)

![Figure 18B. HOLDING mode options, intermittent feeding mode.](image)

Clear Volume Fed

Press CLEAR VOLUME to re-zero the output feed totals “ml FED,” “BOLUSES FED,” and “ml FLUSH.”

Adjust Settings

Press ADJUST SETTINGS to return to one of the opening menus shown in Figures 7A-7D, thus allowing any setting to be modified. If the Pump Set has been removed after going into HOLD, the opening menu will show LOAD A SET, as seen in Figures 5A-5B.

RESUME IN __ MIN (Not Available in EZMODE)

Press “RESUME IN __ MIN” once to immediately place the KANGAROO ePump into a 30-minute resume running mode. Pressing the RESUME IN __ MIN button again will cycle the “resume in” time back to zero. No other input is needed to start the countdown, as the time immediately counts down after the 30 minute value is reached.

Run Mode

Press RUN to immediately restart pump operation. This option will not be available if the Pump Set is removed during HOLD.

View History (Not Available in EZMODE)

Press HISTORY to access the HISTORY screen. Use this screen to review feeding and flushing history. See subsection “More Options” below for further information.
Flush Now *(Not Available in EZMODE)*

During the **RUNNING** mode, the pump can be diverted to immediately perform a flush (flush on demand) by pressing **FLUSH NOW** in the **RUNNING** menu, input a desired flush volume, then press **ENTER**. See Figure 15A. When **FLUSH NOW** is pressed, the screen will prompt for the volume to be immediately flushed, and will show the previously programmed flush volume as default but may be adjusted to the users desired volume. The screen will appear as the standard Flush input screen as shown in Figure 12B (or 14B). Setting the **FLUSH NOW** flushing volume is temporary and will not change the main/periodic flushing volume previously programmed. If **FLUSH NOW** is pressed by accident; the user may either press the cancel button or allow the screen to return to the **RUNNING** screen after 10 seconds, if there is no input for the flush volume.

If stopping a **FLUSH NOW** before the set volume has been delivered is desired, press **FLUSH NOW** and enter a volume of zero and press **ENTER**. The **FLUSH NOW** will stop immediately and the pump will return to the **RUNNING** mode.

More Options

Press **MORE** in one of the opening menus, Figures 5A-5B or Figures 7A-7D, to access the **MORE OPTIONS** screen, Figure 19.

![MORE OPTIONS menu](image)

**Buzzer Alarm Volume**

Press **BUZZER** in the **MORE OPTIONS** menu to access the **BUZZER** screen and increase or decrease the alarm buzzer volume. The alarm will be audible as the volume setting is changed. This sets the volume level for any warning or error that may occur with the pump. Critical errors of System Error and Pump Set Dislodged will always use the maximum volume setting.

**History *(Not Available in EZMODE)***

Press **HISTORY** in the **MORE OPTIONS** menu to access the **HISTORY** screen. Press the **buttons** in Figure 20 to set the time history of interest. The totals of **FEED mL** and **FLUSH mL** will be shown for the requested history time.

**WARNING:** A maximum of 72 hours of past history can be retrieved, excluding data from the current hour.  **NOTE:** The 72-hour history includes time when the pump is powered OFF.
Language Selection

Press › LANGUAGES in the MORE OPTIONS menu to change the preferred language for the screen interface.

Continuous/Intermittent Mode *(Not Available in EZMODE)*

Press › CONTINUOUS/INTERMITTENT in the MORE OPTIONS menu to access the SELECT MODE menu, Figure 10B. Use this menu to select between continuous feeding mode and intermittent feeding mode. See subsection “Selecting Continuous or Intermittent Feed Mode” for more information.

Press › DONE in the MORE OPTIONS menu to exit the menu.

BioTech Menu

The BioTech screen will show technical information about the pump, and has a lock feature to lock the Pump Settings against unauthorized changes.

Accessing the BioTech Screen

To get the BioTech screen, press the power button to start the pump, and press and hold the top › button while the startup sequence (kangaroo icon “hops” across the screen) executes. You must be pressing the top › button at the end of the sequence in order to access the BioTech menu. Figure 21 shows the BioTech screen.

BioTech Screen Data

SN is the serial number of the pump.

SW shows the software version number in this pump.

FLASH shows the version number of the flash data installed in this pump.
CERT INTV indicates the number of times the pump has been powered on since the last re-certification. See Section VI for details of re-certifying the pump.

**BioTech Options**

Figure 22. BioTech option screen, with Lock Setting, EZMODE, and Communications features activated.

**Lock Settings Feature — Program Locked**

To "lock" the settings against unauthorized changes, press ➤ LOCK SETTINGS to get the check mark, as shown in Figure 22. The settings can only be changed again by pressing ➤ LOCK SETTINGS to remove the check mark. If the settings are locked and a change is attempted, the screen will indicate PROGRAM LOCKED, and will not allow access to the parameters, Figure 16.

The pump can be PRIMED or set to RUN, HOLD, etc. when settings are locked.

**EZMODE**

Press ➤ EZMODE to activate the EZMODE feeding option. A check mark will appear next to the ➤ EZMODE button to indicate that the feature is active. Pressing the ➤ EZMODE button again will remove the check mark indicating that the feature is off. If the EZMODE feature is turned on, the EZMODE icon will appear in the lower right corner of the LCD next to the battery icon (see Figure 9). See page 13 for EZMODE details.

**COMMUNICATION**

Press ➤ COMMUNICATION to activate the communication feature. A check mark will appear next to the ➤ COMMUNICATION button to indicate that the feature is active. Pressing the ➤ COMMUNICATION button again will remove the check mark indicating that the feature is off. If the COMMUNICATION feature is turned on, the COMMUNICATION icon will appear in the lower right corner of the LCD next to the battery icon (see Figure 23).

Turning the COMMUNICATION feature on will initiate data transfer of various pump settings, status, errors, etc. through the serial I/O port. If feature is desired, please contact technical support for additional information.

**NOTE:** If EZMODE and the COMMUNICATION feature are both activated the icons for both features will alternate.
Press ▶ DONE to exit the BioTech menu. To re-enter this menu screen, power down the pump and then power it up again and hold the top ▶ button, as described above.

Section VI – Re-Certification of Performance

System Performance Re-Certification

A series of self-diagnostic checks can be run to re-certify pump performance. It is recommended that this re-certification procedure be run at least once per year, or any time the pump is suspected of having improper performance. See Section XIII – Service Part Numbers for ordering new Re-Certification Pump Sets.

Load the Re-Certification Pump Set. The pump will automatically recognize the Re-Certification Pump Set and give brief instructions to initiate the self-diagnostic procedure. Follow the instructions and review the pass/fail information at the end of the test.

Certifying the Accuracy of Pump Flow Rate

Use the following procedure to check the flow rate accuracy:

- Perform test at room temperature 22°C ± 2°C (72°F ± 3°F) with a new Pump Set.
- Fill a new Feed-Only Pump set bag with water to the 500 mL mark.
- Load the Pump Set.
- Suspend the Pump Set bag so that the bottom of the bag is 18 inches above the pump.
- Make sure pump is plugged into A/C power (do not run test with battery power).
- Program a Continuous Mode feed rate (see below for suggested example rates).
- Run the pump for 15 minutes to achieve steady state operation.
- Then begin collecting the water in a calibrated measuring container, such as a large-capacity graduated cylinder, for exactly 30 minutes.

NOTE: The amount of water collected in 30 minutes will be half of the value programmed for the hourly flow rate, within ±10%, or 0.5 mL, whichever is larger.

<table>
<thead>
<tr>
<th>Rate Set</th>
<th>Amount Expected in 30 Minutes</th>
</tr>
</thead>
<tbody>
<tr>
<td>75 mL/hr</td>
<td>33.7 mL to 41.3 mL</td>
</tr>
<tr>
<td>150 mL/hr</td>
<td>67.5 mL to 82.5 mL</td>
</tr>
</tbody>
</table>

If the amount collected is outside the range, load a new Pump Set and re-run the test procedure to confirm results.
Section VII — Cleaning

Cleaning should be performed as needed. It may also be desirable to define cleaning intervals based on knowledge of the environment in which the pump is used. Only personnel trained in the cleaning of medical devices should perform cleaning.

CAUTION: Do not immerse pump or power cord in water or other cleaning solution; clean using a damp (not wet) cloth or sponge. Failure to follow the cleaning procedures described herein could result in hazards to users. As with any AC powered electrical device, care must be taken to prevent liquid from entering the pump to avoid electrical shock hazard, fire hazard, or damage to electrical components.

If any of the following events occur, DO NOT USE the pump until it has been properly cleaned and serviced by personnel trained in servicing KANGAROO ePump enteral feeding pumps:

- wetting of the pump's power cord or leakage into the pump interior during cleaning.
- spillage of large amounts of formula onto the pump exterior, or any spillage onto the power cord.

General Cleaning Directions

Cleaning of KANGAROO ePump enteral feeding pumps must be performed as follows:

CAUTION: Disconnect pump from AC power source before cleaning. After cleaning, do not connect to AC power source until pump and power cord are thoroughly dry.

- A mild detergent should be used for general cleaning. If necessary, the pump may be cleaned with a 10:1 water and hypochlorite mixture, however, repeated cleaning with this solution can damage the plastic pump case. Isopropyl alcohol, applied with a damp (not wet) cotton swab, may be used for cleaning difficult-to-reach areas, however, it should be used sparingly because repeated cleaning may damage the case.
- DO NOT USE strong cleaners such as Spray-Nine™, Phisohex™, Hibiclens™, or Vesta-Syde™ because damage to the pump case housing can result.

Directions for Cleaning Pump Housing

- Refer to General Cleaning Directions before starting.
- Clean outside surface with a damp (not wet) cloth or sponge and keep pump in upright position as much as possible.
- Avoid excess moisture near pole clamp area.
- Do not allow cleaning solution to enter the vertical vents in the housing, underneath the handle.

Directions for Cleaning Pump Power Cord

- Refer to General Cleaning Directions before starting.
- Unless soiling is observed, the power cord should not be cleaned.
- If cleaning of the power cord is necessary, unplug from outlet and wipe the exterior surfaces of the wall plug with a cloth dampened with isopropyl alcohol.
CAUTION: Avoid exposing power cord to excess moisture, as this can lead to an electrical shock or fire hazard.

Directions for Cleaning Rotor Assembly

• Refer to General Cleaning Directions before starting.
• Open the blue door enclosing the Pump Set loading area.
• Loosen rotor set screw with 5/64” (2 mm) allen wrench and gently pull rotor off shaft. After removing rotor, avoid getting any moisture in the rotor shaft opening.
• Clean rollers thoroughly with warm soapy water, or isopropyl alcohol if necessary.
• Be sure all parts of rotor are completely dry before putting it back onto shaft.
• To replace rotor, align set screw on hub of rotor with the flattened section of the output shaft.
• Push rotor into place and tighten set screw (Do not over tighten).

Preventative Maintenance

This pump must be periodically re-certified to assure proper functioning and safety. The recommended service interval is at least once per year. Re-certification may be done at the user's Biomedical Engineering Department, an outside service, or by Tyco Healthcare Group LP Factory Service. To arrange for Tyco Healthcare Group LP Factory Service in the US, call 1-800-448-0190. In Canada, call 1-877-664-TYCO(8926). Outside of the US and Canada, please contact your local Customer Service for more information.

If a pump malfunctions, please contact your THGLP Representative or call Customer Service for instruction.

Section VIII — Battery Replacement

See Figure 24 and do the following to replace the Battery Pack:

• Power down the unit.
• Loosen the Battery Door screw, on back of pump.
• Open Battery Door and disconnect wire harness. A small straight-bladed screw driver may be needed to disconnect the connector tab.
• Slide Battery Pack out of compartment.
• Slide a new Battery Pack into compartment with wire harness extending out.
• Align connector with red wire at upper right.
• Push connector in until properly latched.
• Tuck wires into slot between connector and battery to insure wires are not pinched. Re-tighten Battery Door screw.

Note: Replacement Battery Packs are available from Tyco Healthcare Group LP (See Section XIII - Service Part Numbers).
WARNING: USE OF A BATTERY PACK NOT SUPPLIED BY TYCO HEALTHCARE GROUP LP CAN BE DANGEROUS AND VOIDS ALL WARRANTIES AND PERFORMANCE SPECIFICATIONS.

The battery will charge continuously whenever the pump is plugged into a wall outlet. Eight hours of charging is required to fully recharge the Battery Pack.

Section IX — Error/Warning/Informational Screens and Troubleshooting

For operational errors, the KANGAROO ePump enteral feeding pump display will show the error indicator icon, with specific information regarding the error condition, and will sound the alarm.

The following conditions will trigger error conditions and will activate audible and visible alarms:

- Feed or Flush containers are empty
- Feed or Flush tube becomes occluded between bag and pump
- Tube becomes occluded between pump and patient
- Battery low (alarm beeps continuously, about 15 minutes before shut-off)
- Unit is left in HOLD mode longer than 10 minutes without input
- Pump Set tubing is improperly loaded around the rotor
- System errors, see below
- Feeding complete
- The MISTIC connector is removed during AUTOPRIMING or RUNNING

The Error, Warning, and Information Screens are described below:
System Error (Fixed Audible Volume)

The system error screen is the most general form of error, Figure 25. The only way to exit from a System Error is to power down. No CONTINUE option is allowed because of the severity of the error. An error number is also displayed on the screen, for reference purposes. This number should be reported when calling the Customer Service Support Line.

Figure 25. General System Error screen. See Customer Service section.
Turn the power off and back on to try to clear the error. If the error cannot be resolved in a timely manner, press 🌡️ POWER to stop operation of the pump and put a different pump into service.

**Hold Error (Adjustable Audible Volume)**

The HOLD ERROR screen will appear if the pump has been inactive, without input, for more than 10 minutes. See subsection “Hold” for description of HOLDING mode, Figure 26.

Press ➤ CONTINUE to return to the previous screen. Where settings can be adjusted, the pump can be set to run immediately, or the pump can be set to run in a specified number of minutes. See Figures 18A-18B to see the options on the HOLDING menu screen.

If the error cannot be resolved, press 🌡️ POWER to stop operation of the pump and put a different pump into service.

![Figure 26. Hold Error screen.](image)

**Rotor Error (Adjustable Audible Volume)**

The ROTOR ERROR screen appears during RUNNING or PRIMING, when the pump has detected an unusual operating condition for the rotor. See Figure 27. The ROTOR ERROR generally results from a problem with the Pump Set tubing around the rotor.

Check that the Pump Set is not damaged, and re-load the tubing around the rotor as described in subsection “Loading Pump Sets”. Press ➤ CONTINUE to restart.

If the error cannot be resolved, press 🌡️ POWER to stop operation of the pump and put a different pump into service.

![Figure 27. Rotor Error screen. Re-load the set tubing and press CONTINUE.](image)

**Feed Error (Adjustable Audible Volume)**

The FEED ERROR screen appears when the enteral formula is no longer being delivered because the bag is empty or because of a clog between the pump and the bag. Check the feed line to find the occlusion causing the blockage. If the occlusion cannot be cleared, load a new Pump Set, prime it, and restart the feeding, Figure 28.

If the error still cannot be resolved, press 🌡️ POWER to stop operation of the pump and put a different pump into service.
Flush Error (Adjustable Audible Volume)

The FLUSH ERROR screen appears when the flushing solution is no longer being delivered because the flush bag is empty or because of a clog between the pump and flush bag. Check the flush line to find the occlusion causing the blockage. If the occlusion cannot be cleared, load a new Pump Set, prime it, and restart the feeding, Figure 29.

If the error still cannot be resolved, press \( \text{POWER} \) to stop operation of the pump and put a different pump into service.

Flow Error (Adjustable Audible Volume)

The FLOW ERROR screen appears when either the feeding or the flushing solution is no longer being delivered because of a clog between the pump and the patient. Check the line to find the occlusion causing the blockage. If the error cannot be resolved, check the valve pocket in the Pump Set loading area for dampness or dirt, which may be a cause for a false error. Clean and dry the valve pocket. If the error still cannot be resolved, load a new Pump Set, prime it, and restart the feeding, Figure 30.

If the error still cannot be resolved, press \( \text{POWER} \) to stop operation of the pump and put a different pump into service.

Pump Set Dislodged Error (Fixed Audible Volume)

The PUMP SET DISLODGED screen will appear if the black ring retainer (MISTIC) is not properly loaded in the MISTIC pocket in the Pump Set loading area. Check and correct the positioning of the MISTIC retainer if possible. If the error cannot be resolved, load a new Pump Set, prime it, and restart the feeding, Figure 31.

If the error cannot be resolved, press \( \text{POWER} \) to stop operation of the pump and put a different pump into service.
Battery Low  (Fixed Audible Volume)

The BATTERY LOW screen appears and the alarm beeps continuously when the battery needs to be recharged. There is approximately 15 minutes of battery life remaining when this screen appears, Figure 32.

Plug the power cord in to begin recharging. The pump will automatically return to the screen that was active prior to the error. The battery will charge continuously whenever the pump is plugged into a wall outlet. Eight hours of charging is required to fully recharge the battery pack.

Feeding Complete  (Adjustable Audible Volume)

The FEEDING COMPLETE information screen appears after completion of the programmed feeding, Figure 33. Press » Power Down to turn off the pump. Press » CONTINUE to return to the SET LOADED opening menu, Figures 7A-7D.

Pump Set Use >24 Hours Warning

The Pump Set usage warning indicator will blink on the RUNNING screen if a Pump Set has been used for 24 or more hours (hours actually running). It is recommended to replace Pump Sets after this length of usage. This icon is only an informational message and does not require action.

Figure 34 shows an example of the RUNNING screen, where a Feed & Flush Set has been in use for more than 24 hours. The informational warning indicator shows up in the upper left on the screen.
LED Array

The pump status LED array on the upper right of the pump gives a quick visual indication of the pump status, especially in darkened rooms.

A green light status indicates normal pump operation.

A yellow light status indicates an informational or warning situation for a low battery condition, the pump in HOLDING mode, or one of the following errors: HOLD ERROR, FEED ERROR, FLOW ERROR, and FLUSH ERROR.

A red light status indicates a critical pump error. The screen will show one of the following error messages: SYSTEM ERROR, PUMP SET DISLOGED, or ROTOR ERROR.

Section X — Specifications and Symbols

Specifications

UL Listing

Medical Electrical Equipment

KANGAROO ePump™ Enteral Feeding Pump

(1) Classified with respect to electrical shock, fire, and mechanical hazards in accordance with UL60601-1.

(2) Classified with respect to electrical shock, fire, mechanical and other specified hazards in accordance with CAN/CSA C22.2 No. 601.1

Type Infusion Device

Volumetric

Pumping Mechanism

Rotary Peristaltic

Pump Sets

KANGAROO ePump MISTIC Feed-Only Set or Feed & Flush Set

Feeding Formula Delivery Rate

1-400 mL/hr in 1 mL increments
Feeding Formula VTBD
1-3000 mL in 1 mL increments

Bolus Volume
1-3000 mL in 1 mL increments

Number of Boluses
1-99

Bolus Interval
1-24 hours in 1-hour increments

Flushing Solution Dose Range
10-500 mL in 1 mL increments

Flushing Solution Interval Range
1-24 hr in 1 hr increments

Accuracy
±10% or 0.5 mL/hr, whichever is larger, with bag at 46 cm (18”) above pump, at room temperature 22°C ± 2°C (72°F ± 3°F), using a new pump set with less than the recommended 24 hours of maximum usage.

Occlusion Pressure
15 psi (103 kPa) Nominal

Dimensions
Height: 16.8 cm (6.6”) Width: 16.3 cm (6.4”) Depth: 11.7 cm (4.6”)

Weight
1.1 kg (2.4 lbs), 1.2 kg (2.7 lbs) with pole clamp

Material
Housing: ABS/Polycarbonate blend
Pump Set Door: Polyester/ Polycarbonate blend

Power
Use AC adapter for wall outlet usage. Pump operates on 9V DC, 1.5 Amps.

Battery
New, fully charged NiMH Battery Pack delivers ≥ 15 hrs at 100 mL/hr feed rate. Approximately 15 minutes prior to complete battery discharge, a low battery alarm will occur (see subsection “Battery Low” in Section IX). When complete discharge occurs, the pump will automatically turn itself off.

The battery will charge continuously whenever the pump is plugged into a wall outlet. Eight hours of charging is required to fully recharge the battery pack.

Enteral Feeding Pump
Section XI — Customer Service

The circuitry of the KANGAROO ePump enteral feeding pump is not customer serviceable. In particular, electronic assembly rework by non-authorized KANGAROO ePump enteral feeding pump technicians will likely affect accuracy. Certain replacement items, as listed in Section XII — Service Part Numbers, are available from the service centers listed below.

All service personnel must be properly trained and qualified with operation of the KANGAROO ePump enteral feeding pump. Improper service may impair operation of the pump.

Return for Repair

1. Call Customer Service for an Authorized Return Number and shipping instructions, using the appropriate phone number below:
2. Pack the instrument carefully and ship the insured parcel to:

United States
Tyco Healthcare Group LP
98.6 Faichney Drive
Watertown, NY 13601
1-800-448-0190 or (315) 788-5246

Canada
Tyco Healthcare Canada
7300 Trans Canadian Highway
Pointe-Claire, QC H9R 1C7
1-877-664-8926 or (514) 695-1220

U.K. Service Center (outside of U.S. and Canada)
Tyco Healthcare Group LP
20 Garryduff Road
Ballymoney, BT53 7AP
+44-28276-61719

Section XII — Maintenance

For general maintenance issues not discussed below, contact Customer Service (Section XI).

WARNING: Do not open the main housing, as there are no user-serviceable parts inside. Opening of device may affect function of device and voids the warranty.

The following maintenance items/parts can be replaced by the customer on the KANGAROO ePump enteral feeding pump. See Section XIII for Service Part Numbers and Section XI for contacting Customer Service.

Side Door enclosing Pump Set Loading area

To replace the Side Door, see Figure 35 and do the following:
1. Place top Door Hinge onto the Top Hinge Pin.
2. Carefully press down on the bottom of the door to spread the door hinges apart.
3. Place the bottom Door Hinge onto the Bottom Hinge Pin.
Battery Pack

See Section VIII for full instructions on replacing Battery Pack. During long-term non-usage or storage (greater than 9 months) of the pump, battery discharge and deactivation may tend to occur. It is recommended that the battery be disconnected during this time. The battery may need to be charged and discharged several times to restore optimal capacity.

Battery Door

To replace Battery Door, see Figure 36 and do the following:

1. Align the Battery Door Hinges with the long hinge pins.
2. Snap the hinges onto the hinge pins.
3. Screw down the door to hold in place.

Power Cord

See Section IV for initial setup, including Power Cord attachment.

Pole Clamp

See Section IV for initial setup, including attachment of the Pole Clamp to the pump.
Section XIII – Service Part Numbers

To place an order for parts, or if technical assistance is required, call customer service.

The KANGAROO ePump enteral feeding pump contains a limited number of serviceable parts, Figure 37. User maintenance is to be performed only by appropriately qualified technical personnel.

Visit our web site at: www.kangarooepump.com

Figure 37. User Serviceable Parts.

Section XIV – Warranty

LIMITED WARRANTY: Kendall, a Tyco Healthcare Group LP company, warrants to the original purchaser (“Customer”) that this product will be free of defects in materials and workmanship, under normal use, for one (1) year from the date of original purchase from Tyco Healthcare Group LP or its authorized distributor. If this product does not operate as warranted above during the applicable warranty period, Tyco Healthcare Group LP may, at its option and expense, replace the defective part or product with a comparable part or product, repair the defective part or product, or, if neither replacement nor repair is reasonably available, refund to Customer the purchase price for the defective part or product. Dated proof of original purchase will be required. Tyco Healthcare Group LP does not assume any liability for loss arising from unauthorized repair, misuse, neglect, or accident. Removal, defacement, or alteration of serial lot number voids warranty. Tyco Healthcare Group LP disclaims all other warranties, expressed or implied, including any implied warranty of merchantability or fitness for a particular purpose or application other than as expressly set forth in the product labeling.
Section XV – Electromagnetic Conformity Declaration

The KANGAROO ePump enteral feeding pump has been built and tested according to UL60601-1, E189131 CSA-C22.2 No.601.1-M90, and EN60601-1-2 Standards.

The KANGAROO ePump enteral feeding pump is intended for use in the electromagnetic environment specified below. The user of the pump should assure that it is used in such an environment.

The KANGAROO ePump enteral feeding pump is a reliable and accurate enteral feeding device. The reason for the accuracy of the KANGAROO ePump enteral feeding pump is the design, controlled calibration methods, and stringent manufacturing controls. One of the most critical functional parts of the KANGAROO ePump enteral feeding platform is the AccuSystem√ feeding set produced by Tyco Healthcare Group LP. The functionality of the KANGAROO ePump AccuSystem√ feeding set is extremely important for maintaining quality and also for allowing the accurate delivery of nutrition and hydration.

The reason the KANGAROO ePump enteral feeding pump and the KANGAROO ePump AccuSystem√ feeding sets have satisfied our customers' expectations is due to the integration of these two parts during the manufacturing process. The KANGAROO ePump AccuSystem√ feeding set manufacturing process parameters are tightly controlled at Tyco Healthcare Group LP to minimize variation and produce consistent and reliable products. The special grades of thermoplastic materials are also tightly controlled, and are specifically chosen to deliver consistent quality and accurate flow delivery with the KANGAROO ePump enteral feeding pump. The factory calibration and final determination of an acceptable KANGAROO ePump enteral feeding pump is dependent on the use of acceptable Tyco Healthcare Group LP KANGAROO ePump AccuSystem√ feeding sets. The use of generic feeding sets or other feeding sets not produced by Tyco Healthcare Group LP is not supported or sanctioned by Tyco Healthcare Group LP. The use of unauthorized KANGAROO ePump feeding sets could jeopardize the accuracy of the KANGAROO ePump enteral feeding pump. Check your feeding set for the AccuSystem√ logo to be certain that your KANGAROO ePump enteral feeding pump will deliver accurately every time it is utilized.
