

InfuBLOCK™

InfuSystem provides ambulatory infusion pumps and related clinical support to over 40,000 patients annually, nationwide. We provide accurate, electronic, ambulatory infusion pumps with the appropriate supplies and 24/7 expert clinical support, including our round-the-clock pain management clinical team.

InfuBLOCK by InfuSystem delivers so much more than just a block. Take your Continuous Peripheral Nerve Block program to a new level of convenience and cost savings. InfuSystem can significantly reduce cost concerns for your facility's program and give greater peace of mind to your practice.

With our insurance billing option, we can significantly reduce your current pump cost concerns. InfuBLOCK can bill your patient's insurance, rather than your practice, for use of the pump and supplies, while also providing patient monitoring when the patient arrives home.

No patient insurance? No problem! InfuBLOCK's facility-billed service delivers **BIG SAVINGS** from the high cost of disposable pumps for your patients without insurance, and comes with all of our additional services.
